ABSTRACT OF THE DISCLOSURE

5 A drilling system is provided that includes first and
second tubular connectors and a washpipe assembly including at
least one dynamic seal and defining a fluid conduit having a
first mating connector and a second mating connector. The
drilling system also includes a controllable torque driver
10 arranged to mechanically engage the washpipe assembly such
that fluid connections are made between the first mating
connector and the first tubular connector, and the second
mating connector and the second tubular connector.
